

Meizheng Dairy Test

MEIZHENG BIO-TECH

en.meizhengbio.com

Meizheng is focused on food safety testing solutions and has developed multiple product lines for food safety testing, including rapid testing, microbiological testing, and lab testing solutions. Our solutions are targeted at food value chain stakeholders in various industries like grain, feed, dairy, honey, meat processing, distribution, etc. Our testing items cover biotoxin, heavy metal, vet drug residue, pesticide residue, nutrition, pathogen, etc.

Through years of development, Meizheng has set up 5 entities and 4 manufacturing sites in China, and has developed technological platforms including immunoassay, ELISA, sample preparation, microbiology, standard materials, automated instrument, etc. The company has passed ISO9001 quality management system, and has also set up a certified third party testing lab.

Meizheng is committed to provide fit-for-purpose food safety testing solutions. Various series products such as ToxinFast[®], HMFAST[®], AnticFast[®] and MicroFast[®] have been recognized by customers. Besides China, Meizheng products have been sold in over 20 countries like Russia, Belarus, France, United States, India, Vietnam, etc.

In 2019, Meizheng was incorporated into PerkinElmer, and has further expanded overseas network since then. Also, Meizheng has accelerated various products' certification process in AOAC and ILVO. In 2021, MicroFast[®] Aerobic Count Plate (AC) has obtained AOAC certificate.

For dairy segment, our products cover rapid testing kits and instruments, enabling rapid detection of antibiotic residues, pesticide residues, mycotoxins, illegal additives, adulteration, hormones, and nutrients.

Summary of Rapid Test

Beta-lactams

For rapid screening 15 beta-lactams in cow and goat milk, including penicillins and cephalosporins.

Tetracyclines

For rapid screening 4 tetracyclines in cow and goat milk, including tetracycline, chlortetracycline, doxycycline and oxytetracycline.

Chloramphenicols

For rapid screening 3 chloramphenicols in cow and goat milk, including chloramphenicol, thiamphenicol and florfenicol.

Sulfonamides

For rapid screening 13 sulfonamides in cow and goat milk, eg. sulfamethazine.

Fluoroquinolones

For rapid screening 14 fluoroquinolones in cow and goat milk, eg. enrofloxacin.

Macrolides

For rapid screening 6 macrolides in cow and goat milk, eg. tylosin, abamectin and erythromycin.

Aminoglycosides

For rapid screening 5 aminoglycosides in cow and goat milk, including neomycin, kanamycin, gentamicin, spectinomycin and streptomycin.

Lincosamides

For rapid screening lincomycin in cow and goat milk.

Combo Test

2 in 1, BT, Beta-lactams & Tetracyclines

Test beta-lactams and tetracyclines residues in one single strip. Meet EU, CODEX and Russian Federation maximum residue limits.

2 in 1, BC, Beta-lactams & Cephalixin

Test beta-lactams and cephalixin residues in one single strip. Meet EU, CODEX and Russian Federation maximum residue limits.

3 in 1, BTS, Beta-lactams & Tetracyclines & Sulfonamides

Test beta-lactams, tetracyclines and sulfonamides residues in one single strip. Meet EU, CODEX and Russian Federation maximum residue limits.

4 in 1, BTSC, Beta-lactams & Tetracyclines & Streptomycin & Chloramphenicol

Test beta-lactams, tetracyclines, streptomycin and chloramphenicol residues in one single strip. Customized for CIS region.

4 in 1, BTSQ, Beta-lactams & Tetracyclines & Sulfonamides & Quinolones

Test beta-lactams, tetracyclines, sulfonamides and quinolones residues in one single strip. Meet EU and CODEX maximum residue limits.

OTHERS

Pesticide Residues: Carbendazim, Fipronil, Carbaryl, Imidacloprid rapid screening

Mycotoxin: Aflatoxin M₁ rapid screening

Illegal Additives: Melamine rapid screening

Adulteration: Cow Milk in Goat Milk rapid screening

Nutrients: Vitamin B₁₂, Folic acid, Biotin, Lactoferrin rapid screening

Hormones: Zeranol, Estradiol, Ractopamine, Dexamethasone rapid screening

Fast and efficient

Reliable results

Lateral Flow Rapid Test Kits

Reaction Principle

Lateral Flow Tests (LFTs), also known as lateral flow immunochromatographic assays or rapid tests, is an experimental technique based on the combination of Immune Colloidal Gold Technology and Antigen–Antibody reaction. LFTs are simple devices intended to detect the presence of a target substance in a liquid sample without the need for specialized and costly equipment.

The sample solution absorbed on the sample pad is wicked onto the NC membrane (nitrocellulose filter membrane). The target substance in the sample solution competes with the test line (T line) on the NC membrane for binding the gold conjugated antibodies. The presence of a target substance in the sample is qualitatively determined through the color contrast of C line and T line.

Test Procedure

Add 200µL milk sample and mix well.

Incubate for 2 minutes at 40 °C.

Develop color for 5 minutes at 40 °C.

Interpretation.

Visual Interpretation

Product Information

Detection Sample: Raw milk

Storage: 2–8°C , keep away from sunlight and moisture.

Shelf life: 12 months.

Have positive / negative control in the kit.

AnticFast[®] ELISA Test Kits

Features

High sensitivity

Simple pre-treatment

Reliable results

ELISA Test Kits

Reaction Principle

The Enzyme-linked Immunosorbent Assay (ELISA) is a common experimental technique based on immunological reaction with high sensitivity, which combines antigen-antibody (Ag-Ab) interactions and catalytic action on substance by enzyme.

Antigen-antibody interaction occurs in a polystyrene microtiter plate (a solid support). After incubating with the reagent, the unbound antibodies are removed by washing the plate to ensure the specificity and stability of the results. For competitive ELISA, the more antigen in the sample solution, the more Ag-Ab complexes are formed and so there are less unbound antibodies available to bind to the antigen coated in the well.

Test Procedure

1. Sample preparation.

2. Add standard, samples, enzyme conjugate, antibody, then incubate.

3. Wash the plate.

4. Develop color: add substrate solutions and incubate.

5. Stop reaction.

6. Interpretation.

Product Information

Detection Sample: Raw milk and milk products

Storage: 2–8°C , keep away from sunlight and moisture.

Shelf life: 12 months.

For the specific detection samples, please refer to the user instructions or consult your sales representative.

DASH Test Kit

Reaction Principle

DASH (Dairy Antibiotics Spore High-throughput) Test Kit uses the principle of microbial inhibition.

The microwell plate is filled with a culture medium containing *Bacillus stearothermophilus* spores and a pH indicator. When cultured at 65 °C , the spores germinate, and the bacteria grow and metabolize to produce acid. The pH value decreases and the indicator changes from purple to yellow.

If target samples contain antibiotics, the antibiotics will inhibit bacterial growth, so that no acid is produced, the indicator does not change color with purple maintained; if target samples do not contain antibiotics or the content of antibiotics is below the detection limits, the spores germinate, metabolize acid production, and the culture medium turns yellow.

DASH Test Kit

Test Procedure

1. Take required amount of microwells.

2. Pipette 50µL milk sample to each microwell.

3. Incubate for 135–165 minutes at 65°C.

4. Interpretate the results according to the colorimetric card.

Detection Limits

Antibiotic	LOD (ppb)	Antibiotic	LOD (ppb)	Antibiotic	LOD (ppb)
Beta-lactams		Sulfonamides		Macrolides	
Penicillin G	2	Sulfamethazine	20–50	Erythromycin	100–150
Ampicillin	2–3	Sulfadimethoxine	25–50	Spiramycin	400–800
Amoxicillin	2–3	Sulfamerazine	100	Tilmicosin	50
Nafcillin	5	Sulfathiazole	40	Tylosin	20–40
Cloxacillin	20	Sulfadiazine	50	Quinolones	
Oxacillin	6–10	Sulfadoxine	50	Ciprofloxacin	1000–1500
Dicloxacillin	10–15	Sulfamethoxazole	< 25	Danofloxacin	1000–2000
Cefacetrile	20	Sulfamethoxypyridazine	60–80	Marbofloxacin	> 1000
Cefalexin	60–80	Sulfisoxazole	50	Aminoglycosides	
Cefalonium	10	Sulfachlorpyridazine	25–50	Gentamicin	100
Cefoperazone	30	Sulfaphenazole	25–50	Kanamycin	2500
Ceftiofur	50	Sulfamethoxydiazine	50	Neomycin	200–300
Cefquinome	75	Sulfabenzamide	100	Spectinomycin	>300
Cefapirin	2.5–5	Sulfaclozine	100	Streptomycin	1100–1500
Cefazolin	10–15	Sulfapyrazole	50	Dihydrostreptomycin	700–1000
Tetracyclines		Sulfamethoxypyrazine	25–50	Various	
Chlortetracycline	100	Sulfisomidine	50	Chloramphenicol	2500
Doxycycline	100	Sulfamonomethoxine	50	Rifaximin	60–100

Tetracycline	100	Sulfaquinoxaline	50	Thiamphenicol	> 1000
		Sulfamethazole	100	Trimethoprim	100
		Sulfamethizole	80–100	Lincomycin	150

Product Information

Catalog No.: WC0006

Detection samples: raw cow's milk, raw sheep's milk, raw goat's milk, UHT milk and milk powder.

Storage: 4–8°C

Shelf life: 12 months

Immunoaffinity Columns

Features

High specificity and precision

For complex samples

Immunoaffinity Columns

Reaction Principle

Immunoaffinity Columns (IAC) technology are based on a specific binding of the antigen to antibody–analyte, which can be used for purification and concentration of the target substance in a sample.

Immunoaffinity columns contain a gel bed with toxin–specific antibodies coupled to the gel particles. These antibodies will capture the target substance in a sample. The impurities which are not combined with antibodies will be washed out from the column. The target substance is recovered in the eluting solution to achieve the high–efficiency purification and concentration.

Detection Sample: Dairy product

Product List of Immunoaffinity Columns

Catalog No.	Product Name	Column Capacity (ng)	Specification
QC0131/QC0071	Aflatoxin M ₁ Immunoaffinity Column	100	3mL,25T/50T

MicroFast[®] Microbial Count Plates

Features

Precise and consistent results

Easy operation, work efficiency

Rapid diffusion technology

Intuitive observation

Microbial Count Plates

MicroFast® microbial count plate is a rapid and reliable microbial testing solutions, which can greatly improve the efficiency of laboratory testing and is widely accepted by enterprises.

Reliable results, Only 3 Steps

- **Inoculation** Lift the top film and add sample.
- **Incubation** Incubate the plates following the instruction.
- **Interpretation** Count the colonies.

Inoculation

Incubation

Instruments

BMZ6000 Portable Strip Reader

- Small and portable
- Fast detection and stable operation
- Large capacity memory
- Thermal print function
- LCD touch screen, Android operating system, user-friendly

HMG-GS Dry Heater

- Low energy consumption, no noise
- Temperature deviation calibration function
- Automatic fault detection and alarm function
- Built in over temperature protection device, safe and reliable
- Fast heating speed, uniform heating and accurate temperature control

HF4500 Microplate Reader

- High definition display, small size
- Support TF card to expand memory
- WiFi module, connection to the laboratory information system supported
- The board can be arranged in rows, which is efficient and convenient
- Android operating system, mouse operation, keyboard operation and independent offline-work supported
